

HIGH EFFICIENT MODULAR STANDARD PLANTS

QUARRY MINING LLC (QM) design, manufacture and install Crushing & Screening plants in compliance with European standards, while adhering to the same safety standards and features that you would expect of equipment produced in Europe. QM is certified for quality management by ISO Certificate 9001:2008 and for environmental management by ISO Certificate 14001:2004 from the German Technical Inspection Association TÜV Rhineland/Germany, and include the continuous integration of all upgrades. QM is founded and managed by German Nationals but located in the United Arab Emirates. QM can supply high-quality plants with very competitive prices, real value for money.

Considering the market needs for high-efficient, modular combinable and cost-optimized stationary and semi-mobile plants to produce aggregates, QM has developed and engineered by themselves three types of Standard Plants for such applications, but also individual plants during the past years:

- Semi-Mobile Primary Plant (SLP plant from 200t/h up to 400t/h)
- Stationary Secondary Plant for Normal Rock (SSN plant from 200t/h up to 900t/h)
- Stationary Secondary Plant for Hard Rock (SSH plant from 150t/h up to 400t/h)
- Individual Plant (individual capacity and configuration as per request)

The aim is to provide high-quality and modular combinable primary and secondary plants at competitive prices. Therefore, QM has rethought the world of stationary and semi-mobile screening and crushing plants. With a completely new concept, based on the latest technologies and combined with over 40 years of experience, QM has designed and established a new generation of plants with capacities ranging from 100t/h to 900 t/h. Primary plants can be combined with suitable secondary plants, but also existing equipment can be used. A huge range of available options will enable the plants to be upgraded to suit the customers' needs and to meet the expectations of the client. This not only includes more comfort but also the highest environmental solutions. One of the biggest advantages is the possibility to combine the primary and secondary plants modularly and as per the individual requirements of the material and in accordance with the production demand. Quarry Mining LCC is one of the leading suppliers for stationary and semi-mobile plants in the Middle East, MENA region and Africa. All plants ensure high availability, low production costs per ton and easy maintenance to bring your business to the next level. Supporting you from the first drawing until the production of the first aggregate, Quarry Mining will ensure sustainable and tailored support.

Your world is our challenge and we perform this every day.
